

Review

for an educational and professional program

General Medicine

presented for public discussion at I. Horbachevsky Ternopil National Medical University

This educational and professional program was developed at I. Horbachevsky Ternopil National Medical University of the Ministry of Health of Ukraine, meets the standard of higher education with the specialty 222 "Medicine", aimed at training applicants of the second (master's) level of higher education in the field of health care, namely doctors.

The Ministry of Health of Ukraine has all the necessary resources to organize the training of masters of medicine - doctors at the Ternopil National Medical University. The university has many years of experience in international education, including English-language teaching of all disciplines. For the education of Ukrainian and international students, there is an adequate educational and methodological support for the educational component of master's training, the website of the university and the faculty of international students with a sufficient amount of educational and methodological content, modern information sources and computer equipment, a library with educational literature, scientific and reference books and professional periodicals, technical teaching aids, the availability of bases (educational classrooms, clinical and experimental laboratories, clinics) for carrying out all types of work for the the educational and professional program of master's training, adequate personnel support for teaching academic disciplines and managing scientific research. All scientific and pedagogical workers who teach disciplines according to the peer-reviewed educational and professional program have a scientific degree and an academic title, as well as qualifications in accordance with the specialty, confirmed by scientific, scientific and pedagogical, professional activities and relevant specialization.

This educational and professional program takes into account the educational needs of applicants in the acquisition of practical skills both in the simulation center of the university using modern simulation and information technologies and methods, and in many clinical bases of the city and region.

Thus, the program is developed at a high professional level and can be recommended as an educational and professional program for the second (master's) level of higher education in the specialty 222 Medicine.
